

Websockets

Access data using websockets

- Usage

Usage

Sample websockets usage in javascript:

```
const socket = io.connect('https://dataapi.vaclavlepic.com');

// Subscribe to temperature updates
socket.emit('subscribe', { measurement: 'outdoor_temperature' });

// Handle temperature updates
socket.on('outdoor_temperature_update', function(data) {
  console.log(`Teplota: ${data.measurement_values[0]} °C at ${data.time_values[0]}`);
});

// Unsubscribe from temperature updates
function unsubscribe() {
  socket.emit('unsubscribe', { measurement: 'outdoor_temperature' });
}

// Example: Call unsubscribe after 10 seconds
setTimeout(unsubscribe, 10000);
```
